

Large Print Keyboards

Large print, high contrast keyboards are perfect for anybody who has a hard time seeing the

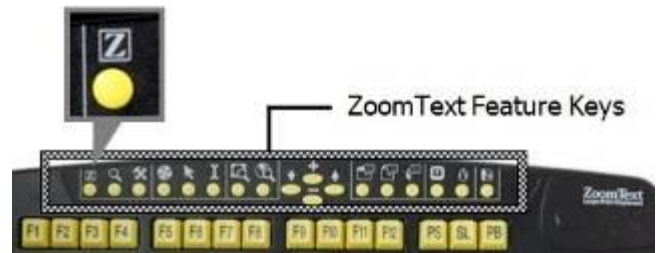

black on white.

Though the print on the keys is larger, the keys themselves are the same size as a regular keyboard.

Zoomtext Keyboards

Next to the regular Keys-U-See Large Print keyboards there are also special Zoomtext keyboards that have special function keys to control the Zoomtext magnification software from the keyboard. Zoomtext keyboards come in either black on yellow or white on black. To use the special Zoomtext function keys, you need to have Zoomtext running on the PC.

Magic Large Print Keyboard

The Magic white-on-black keyboard has bold, high contrast keys, and provides convenient, one-touch access to commonly used MAGIC and JAWS commands. Features include:

- Bold, high contrast keys
- Scroll wheel to control magnification level
- 22 dedicated keys to instantly start MAGIC and provide quick access to the most-used MAGIC features

You need to have MaGic running on

the PC to use the special functions.

All of the above keyboards can be connected via a USB port and will work on a Windows XP, Vista or Windows 7 PC.
