

Topaz CCTV series

The new TOPAZ desktop video magnifiers, make for easy reading of a wide variety of printed materials. Easy to use: just flip the switch to turn on the TOPAZ, and three dials are all you need for your basic video magnification functions.

New 20 to 24-inch widescreen models with a wider field of view and lower minimum magnification level will allow many users to see a full line of text of the screen. The new control panel is easier to learn than ever. A new Find feature zooms out to provide an overview of the page then zooms back in to the user's reading magnification level.

A large illuminated non-reflective working area, wider field of view, and deeper range of focus make sewing, painting, repairing items, and other non-reading activities easier as well.

At a glance

- Ergonomic design with easy-to-use controls.
 - Magnification range (screen dependent): 2.3 – 74x
 - 21cm of workspace under the camera.
 - Extra large reading table.
 - True colour and 30 customizable high contrast text colour modes.
 - Freeze Frame and Focus Lock.
 - Fully adjustable monitor that tilts, swivels 180 degrees side-to-side and is height adjustable.
- Size: 63.5 cm x 43.7 cm x 43.9 cm. Weights: 14.1 – 19.8kg.
 - Wide magnification range: from more overview to more magnification.
 - All the controls are right under the display – handy when you want them and never in the way of your reading material or your work.

Topaz XL

TOPAZ XL models include all the TOPAZ features plus lines and masks, position locator, and VGA input to toggle between the PC and camera view on the TOPAZ monitor. With Freedom Scientific's optional GEM software, low vision users can bring the magnified image to their PC and work in multiple split screen views so that they see their magnified document and their application at the same time. Users can quickly capture multiple images, review them with a single keystroke, and select which ones to save.
