

knfbReader Mobile

Making print accessible wherever you are.

The knfbReader Mobile software, developed by K-NFB Reading Technology Inc. from the USA, turns a cell phone in a truly pocket-size reader.

It is designed to be operating on a Nokia mobile phone and makes it the smallest text-to-speech reading device in history. It enables users to take pictures of and read printed material at the push of a button. Blind users hear the contents of the document read in clear synthetic speech, while users who can see the screen and those with learning disabilities can enlarge, track and highlight printed materials using the phone's easy-to-read display.

The Reader gives immediate access to printed information whether it is a menu, document, receipt, memo or a letter. Reading in other languages is available along with translation between languages.

- The knfbReader Mobile software can be installed on a number of Nokia phones.
- Reads at the press of a single button.
- Reads most printed documents, from letters and memos to pages in a book.
- Reads address labels and package information and instructions .
- Easily recognizes U.S. currency.
- Displays each sentence visually and highlights each word as it is read.
- Stores thousands of pages using easily obtainable flash memory.
- Transfers text files to and from computers or Braille displays.
- Adjusts reading speed to suit user's preference.

Notes:

- Depending on the availability, the knfbReader software will be supplied with or without the Nokia phone which it needs to work Contact us to hear about the possibilities.
- For the translation part of the software Internet access is necessary
